Hat Care

This guide aims to offer advice on how to look after your hat(s) as well as some tips on storage.

Tips for storing your hat:

- Keep hats away from direct sunlight and away from heat sources as it may fade/damage the fabric.
- It is best to store the hats in their natural shape on a flat surface.
- It is OK to compress hats for short periods of time, such as during transit for a few hours, as the hat will pop back to its original shape when uncompressed.
- Compressing for long periods of time may distort the shape.

Washing your hat

You can machine wash your hat on delicate and/or cold temperature, with 20°C (or 68°F) being the recommended temperature. Do not exceed 30°C (or 86°F) as it may damage the fabric. Please remove ribbons and/or bows prior to washing as they may shrink! Do not use bleach.

If you decide to wash the hat by hand, fill your sink/large container with lukewarm water with a mild detergent. Once the mild detergent has fully dissolved, you can place the hat in the water. You may have to squish the hat to get it to fully submerge. Once it's submerged, gently massage the hat for a few minutes and then leave to soak for 15-20 minutes.

After soaking, drain the water and wring out the hat, then refill your sink/container with clean water and swish the hat around in the water to remove the soap. Repeat this step until the water is clean and there are no soap suds, or alternatively you can keep the hat under the tap until the water runs clear. Once all the soap has been removed, wring out the hat again to squeeze out the excess water.

Once you have removed the excess water, make sure to 'pop' your hat back into its original shape. This may include flattening/straightening the brim and popping the hat outwards if it's squished inwards. Once it's in its original form, leave to dry on a flat surface. Avoid putting it directly on a radiator/high heat as it may damage the fibres especially with the Christmas hats.

Thank you for taking the time to read over this guide, by following this information, you should be able to maintain your hat and ensure that it stays in good condition.
